this paper considers different approaches to modelling the economic impact of the covid 19 pandemic lockdown shocks we review different modelling strategies and argue that given the nature of the bottom up recession caused by the pandemic lockdowns simulation models of the shocks should be based on a social accounting matrix sam that includes both disaggregated sectoral data and the national accounts in a unified framework sam based models have been widely used to analyze the impact of natural disasters which are comparable to pandemic lockdown shocks the pandemic lockdown shocks occurred rapidly in weeks or months not gradually over a year or more in such a short period adjustments through smooth changes in wages prices and production methods are not plausible rather initial adjustments occur through changes in quantities altering demand and supply of commodities and employment in affected sectors in this environment we use a linear sam multiplier model that specifies a fixed coefficient production technology linear demand system fixed savings rates and fixed prices there are three different kinds of sectoral shocks that are included in the model 1 changes in demand due to household lockdown 2 changes in supply due to industry lockdown and 3 changes in demand due to induced macro shocks at the detailed industry level data are provided for all three shocks and the model imposes the largest of the three we applied the model on a monthly time step for the period march to june 2020 for four countries us uk mexico and south africa the models closely replicate observed macro results gdp and employment for the period the results provide detailed structural information on the evolution of the different economies month by month and provide a framework for forward

looking scenario analysis we also use the sam multiplier model to estimate the macro stimulus impacts of policies to support affected households the model focuses attention on the structural features of the economy that define the multiplier process who gets the additional income and what do they do with it and provides a more nuanced analysis of the stimulus impact of income support programs than can be done with aggregated macro models
